

1. Shopping Cart Quantity Manager

Problem Statement

Create a shopping cart application that displays a list of products.

Requirements

- Store products in state.
- Each product should contain:
 - ☐ id
 - ☐ name
 - ☐ price
 - ☐ quantity
- Create a ProductCard child component.
- Pass product data using props.
- Add:
 - ☐ Increase Quantity button
 - ☐ Decrease Quantity button
- Display total price for each product.

Concepts

- State with arrays
 - Props
 - Updating specific objects in an array
-

2. Course Enrollment System

Problem Statement

Create a course enrollment dashboard.

Requirements

- Store multiple courses in state.
- Each course should have:
 - ☐ Course Name
 - ☐ Trainer Name
 - ☐ Enrolled Status
- Display courses using a child component.
- Add an Enroll/Unenroll button.
- Button should toggle enrollment status.

Concepts

- Boolean state updates
 - Props communication
 - Conditional rendering
-

3. Employee Directory

Problem Statement

Build an employee directory.

Requirements

- Store employee data in state.
- Display employee cards using props.
- Add:
 - ☐ Promote Employee
 - ☐ Demote Employee
- Employee designation should update dynamically.

Example Designations

- Junior Developer
- Developer
- Senior Developer

Concepts

- State updates
 - Object manipulation
 - Parent-child communication
-

4. Movie Rating Dashboard

Problem Statement

Display a list of movies.

Requirements

- Store movie details in state.
- Create a MovieCard component.
- Pass movie data via props.
- Add:
 - ☐ Increase Rating
 - ☐ Decrease Rating
- Rating should remain between 1 and 5.

Concepts

- Array state updates
 - Props
 - Validation
-

5. Student Result Portal

Problem Statement

Create a student result management application.

Requirements

- Store:
 - Name
 - Marks
 - Grade
- Display data in a child component.
- Add buttons:
 - Add 5 Marks
 - Subtract 5 Marks
- Grade should update automatically.

Grade Logic

- A: 90+
- B: 75+
- C: 60+
- D: Below 60

Concepts

- Derived data from state
 - Props
 - Conditional rendering
-

6. Team Scoreboard

Problem Statement

Build a cricket scoreboard.

Requirements

- Store:
 - Team Name
 - Runs
 - Wickets
- Create child component for display.
- Add buttons:
 - Add Run
 - Add Four
 - Add Six
 - Add Wicket

Concepts

- Multiple state variables
- Props
- Event handling
